Agenda Item #:	Title:				
17	Discussion, consideration, and possible action on a quote for upgraded INCODE software.				
Summary: An upgrade for INCODE software is needed for the following reasons: 1. RSI is recommending this software be hosted on the cloud and removed from our servers. 2. All court files would be accessible from any computer with an internet connection, which would lessen service calls to RSI. 3. The new program will enable the court to go paperless, which means cost-savings on preparing mailings and postage, files can be accessed from anywhere, even if staff are out of the office due to illness or training. 4. The new program comes with an 800 phone number, which allows customers to check their balances over the phone and make payments via an automated system. Customers frequently request phone payment options but due to security, we cannot take phone payments. 5. Upgrade comes with an interactive website for customers to use which will give them options available to them to handle their citations, which means less wait times for customers and better service. There is an annual fee and a one-time migration fee that will need to paid next fiscal year. The new budget has already allowed for an upgrade made possible by the various court special revenue funds to contribute more towards expenses in the General Fund.					
0.11 ()					
Option (s):					
	I make a motion to approve the INCODE upgrade at an annual cost of \$17,579 for the next three years, and an additional one time fee of \$13,260 for the migration which will be paid in the budget for fiscal year 2026-2027.

 Travel Charge

Total due upon completion: \$11,400.00

(Estimated for 4 days. If over 4 days, \$1,950.00 per day after 3 days)

Additional sediment removal may take additional hours. Other factors that may take additional time are: Removal of rock or concrete may also constitute additional time. If solid debris is hidden within the sediment and causes breakage or failure of our pump, additional costs may be assessed to cover impeller replacement or repairs to our pump. Sediment is removed to the utility yard; normally this will fill in low spots in the yard. ACCESS: We need 10 to 12 hours access to the tank per day. Forcing our crew to quit before dark will add days to the process and could double the cost of this proposal.

ROV Interior Inspection

- Please note, our Remote Operated Vehicle (ROV) unit requires, at minimum, a 12" diameter manway/opening.
- The interior in-service inspection will be performed using our ROV Inspection Robot and the exterior will be inspected by our personnel trained in OSHA regulations utilizing fall protection equipment. Tank is to remain full during internal inspection.
- This inspection will check for deficiencies and meet tank inspection requirements of OSHA, EPA, AWWA and NFPA. All structural, sanitary, safety, security and coating conditions will be reviewed. Items examined will include ladders, shell, roof, vent, manways, welds, seams, foundation, anchors, safety systems, hatch, and external overflow. Any emergency items will be brought to Owner's attention by our Inspector personnel.
- Owner will receive a detailed written report of findings with photographs, video of inspection, corrective recommendations and cost estimates.
- The following tests shall be performed during the inspection: Lead check Interior & Exterior (Only applicable to tanks erected prior to 1990). Mil thickness test (coating thickness) Exterior only, Cross hatch test (paint adhesion) Exterior only, Ultra-sonic test of tank shell Exterior only. *If the tank is insulated, these tests are limited to exposed tank accessories only. Ultra-sonic thickness testing or mil readings of the shell or roof would require sections of the insulation to be removed to allow for proper testing. On spray foam insulated tanks, we will cut out various sections of foam to allow for the readings to be taken and the areas will then be repaired with aerosol foam cans. Panel insulated tanks will be repaired by installing inspection ports that will allow for continued use on future inspections. This would be done at an additional cost per port.

ROV Interior Clean Out

An interior in-service cleanout of sediment from the tank floor is not to exceed three (3) inches. Additional accumulation will be priced at \$300/hour after 3 inches. The interior cleanout will be performed using our Remotely Controlled Submersible Vehicle. The tank cannot have more than 12' of open head space from the top of the water to the top of the tank during the internal cleanout.

Our price is based on dimensions acquired from the Customer, who understands that if the size of the tank is larger than implied, our price will be adjusted accordingly.

- Debris and sediment will be placed on the ground or in a customer designated drainage area within 50' of the tank base. The customer is to provide an area for disposal of all debris, sediment and water generated from the robotic cleanout.
- The majority of sediment will be removed from the tank with the robotic equipment; however, the customer understands that 100% removal of sediment and debris cannot be attained without draining the tank.
- Please note that our ROV cleanout robot requires at least a 24" (round or square) opening.
- If the interior access ladder impedes the manway and restricts access to the tank interior with our ROV cleanout robot, the Owner agrees that the top few rungs may be removed to gain access to the tank as long as the structural integrity of the interior access ladder will not be compromised.
- If any other tank accessories impede the opening, the Owner agrees that necessary modifications may be made, which will be in accordance with AWWA,
 to gain access to the tank.
- In the event in becomes necessary to drain the tank once we are on site, draining shall be performed by the Owner.
- If the Owner does not allow us to make the necessary modifications to the tank and the ROV cleanout robot cannot access the tank, a mobilization fee
 will be charged.
- Please Note, Owner is responsible for the water discharge process. PTTM will provide piping of up to 100' to direct discharge from the tank. Owner's
 representative will direct where the water is discharged to.
